## Complete Solutions for Engineered Valves

As one of the leading valve manufacturers in the world, NEWAY specializes in the development of innovative designs through intensive R&D programs and a commitment to excellence, engineering and manufacturing valve solutions for all industries.

NEWAY's main product lines include Gate, Globe, Check, Butterfly and Ball valves with quality innovative designs, recognized by many global users and EPC's. These products have been installed throughout the world in Gas, Oil, Refining, Chemical, Marine, Power Generation and Pipeline Transmission industrial applications.

## NEWAY'S Facilities

NEWAY's facilities are among of the most advanced in valve manufacturing in the world today. NEWAY has developed and implemented a group management system base on multi-plant manufacturing. Valves are manufactured in six specialized production facilities that are linked by an intranet system of over 600 computers, connecting engineering to the CNC machining centers, and the bar-coded warehouse system. NEWAY had implemented an Enterprise Resource Planning (ERP) manufacturing management system. In-house testing capabilities include fire-safe, cryogenic, high pressure gas and fugitive emission testing.

## Quality Assurance

NEWAY's quality assurance is dedicated to the pursuit of zero defect valves to customers. We perform active Six Sigma quality management to continually enhance process control management based on advanced data statistical analysis. NEWAY's industrial certificates include ISO 9001, CE/PED, TA-Luft, API 6A, API 6D, ABS, and Fire Safe approvals.

# Quality Commitment

ISO 9001

API 6D

API 6A

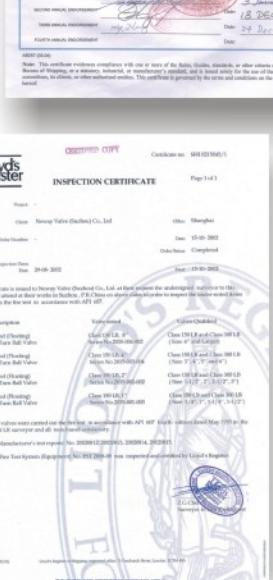

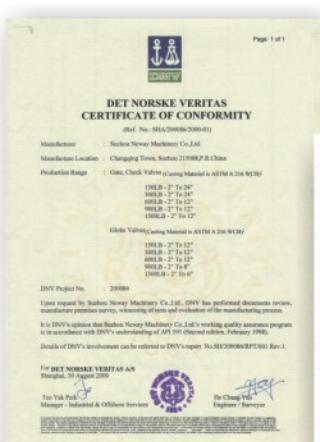

CE/PED

Neway recognizes the importance of valve quality for the safety and protection of personnel health and property. It is our quality commitment to focus our resources to provide our customers with first class products at a competitive price, designed, manufactured, inspected and tested in accordance with our customers specifications and complying with all international standards.

Current industrial standards do not always take into consideration the likelihood and consequences of possible deterioration in service, related to specific service fluids or the external environments in which they operate. Therefore we request that our customers communicate with our engineering department. Our valve optimization program continuously strives to provide valves that withstand deterioration in service, and ensure safety over the valves expected lifetime.

<b>Note:</b>																											
1. Face to face and end to end dimension conform to BS 2080,ANSI B16.10 or ISO 5752,																											
2. End flange dimension conform to ANSI B16.5 for 24 " and below, and ASNI B16.47 for 26 " and above size,																											
3. BW end dimension conform to ANSI B16.25,																											
4. Inspection and test in accordance with API 598 or BS EN 12266,																											
5. Larger than 64 " Valves are available based on Neway standard design.																											

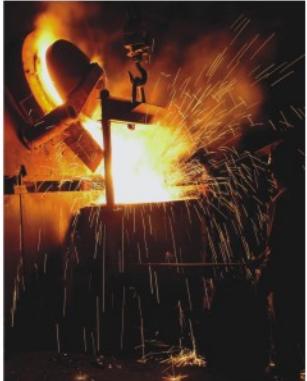

Technical innovation drives Neway's continuous growth. Neway is proud to have a young and creative engineering team who are well versed in the most advanced science and technology used in research and development of products to meet the increasing market demands. Neway has established 3 valve engineering teams: New Product Reach & Development team, Product Design team and Process Technology team.

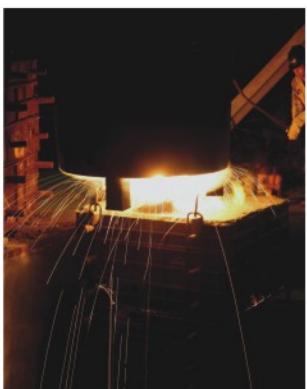

Each Neway engineering team strive to develop technologically advanced, high quality, safety and cost-efficient valves. We use the most advanced computer technology to improve the existing products and to develop new product lines, this includes the advanced close tolerance measurement equipment to virtually verify the new designs prior to production; this has resulted in dramatically reducing the design time and ensuring a safe and cost efficient final product.

Neway closely cooperates with science and research institutes and universities, we have developed valve specific software packages, Particularly in the field of valve 3D structure and finite element analysis Neway leads the way internationally in valve manufacturing and technological innovations.

# Introduction of Foundries

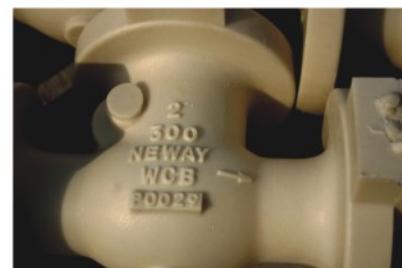

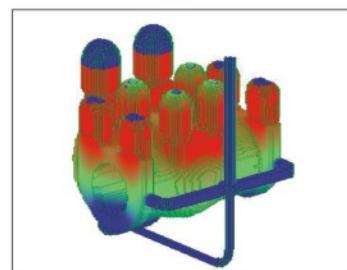

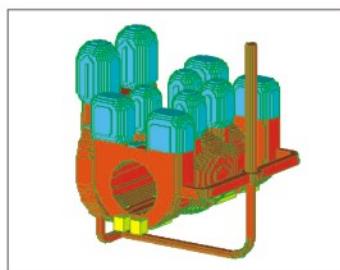

As a pressure-contained equipment in process control pipeline, the valve casting quality is the most important aspect for valve life and personnel and environment safety, particularly when used in high temperature and high pressure applications. So castings are always certified firstly by the strict customer before valve manufacturer are pre-qualified and approved as a qualify supplier.

Unlike many other manufacturers, Neway has its own foundries: one mainly produces large size sand castings using the organic ester water glass sand cast process, and the other produces small size investment castings using the loss wax investment cast process. Each foundry is equipped with a wide range of quality inspection equipments, such as: spectrum instrument analyzer, non-destructive test equipment, mechanical properties test equipments etc, Neway controls the whole valve manufacturing process to ensure the final products quality, on time delivery at a competitive price, this makes Neway to be the supplier of choice for many customers.

# Introduction of Foundries

## Supply Range & capacity :

Plant Name	Dafeng Foundry	Suzhou Foundry
Process Technology	Lost wax investment casting	Organic ester water glass sand casting
Size Range(in)	1/2" ~10"	2" ~64"
Pressure Rating	ANSI Class 150~600	ANSI Class 150~2500
Weight(Kg)	1~150	100~11000
Material	WCB, WCC, LCB, LCC, WC6, WC9, C5, C12, C12A, CF8, CF8M, CF3, CF3M, CN7M, Monel, Inconel, Duplex Steel, 4A	
Monthly Capacity(Ton)	600	750
Quality Certificate	ISO9001, CE/PED, AD W0	

# Advanced Manufacturing

As a modern manufacturer, NEWAY actively introduced many advanced new manufacturing processes and equipments, utilizing the latest computerized manufacturing technology. These include a large number of numeric control machines (Machining center, CNC horizontal and vertical lathe, CNC drilling machine), ERP manufacturing management system, warehouse management system (WMS), bar code system, RFID-Radio Frequency Identify technology and SSW-Stereoscopic Storage Warehouse, which significantly improve our machining quality, process control and logistic efficiency.

NEWAY also utilizes a number of conventional lathes with the capacity to machine up to 64" gate valves, and highly efficient automatic submerged arc welding machine with double arms enabling NEWAY to produce up to 60" fully seal welded body ball valves.

The aforementioned reinforce NEWAY's manufacturing philosophy of supplying stable quality product and just in-time delivery services.

# Quality Control

NEWAY has developed an extensive and advanced inspection and test facilities to control the quality from rough castings or forgings to finished products. These facilities enable us to do in-house Radio Graphic test, Dye-penetrant test, Magnetic test, Positive Material Identifier (PMI), Impact test, Vacuum test, Low Fugitive Emission test, High Pressure Gas test, High Temperature test, Ultrasonic test and Hydro Static test.

NEWAY's quality assurance is dedicated to the pursuit of providing zero defect valves to our customers. NEWAY operates under the 6sigma quality management system to continually improve management process control using advanced statistical data analysis. NEWAY has obtained several international certificates, including ISO 9001 (certificate under DNV), API 6A (registered no.6A-0716), API 6D (registered no.6D-0285), and our offshore platform valves are approved by ABS. Moreover, NEWAY is the first valve manufacturer in China to be certified by CE/PED (category IV, mode B+D, certificate under B.V.), all of NEWAY soft seated ball valve are fire safe tested and certified by Lloyd's Register.

# How to Order

## Example:

Neway figure numbers are designed to cover essential features. When ordering, please show the figure numbers and a detailed description to avoid misunderstanding of your requirements.

## Following descriptions provide a basic guideline in valve specification:

### ① Valve Size

### ② Valve Type

### ③ ANSI Class

Valve Type	Gate Valve	Globe Valve	Swing Check	Code	1	3	6	9	15	25
Symbol	G	GL	S	Class (LB)	150	300	600	900	1500	2500

### ④ End Connection

Symbol	End	Symbol	End
R	Raised face flanged end	S	Socket welding end
J	RTJ flanged end	N	Screwed end
B	Butt-welding end	F	Flat face flanged end
W	Wafer		

### ⑤ ⑥ Actuator and Special Code

Symbol	Description	Symbol	Description
	Handwheel Operator	SC	Stop check
G	Gear Operator	AN	Angle type globe
M	Electric Actuator	R	Reduce bore
P	Pneumatic actuator	GL	Seat and Stem Injection
NRS	Non rising stem	ASC	Angle type stop check
PS	Pressure seal	BP	By Pass

### ⑦ Shell Material

Material	WCB	LCB	LCC	WC6	WC9	C5	CF8	CF8M	CF3	CF3M	CD4MCuN
ASTM Ref	A216 Gr. WCB	A352 Gr. LCB	A352 Gr. LCC	A217 Gr. WC6	A217 Gr. WC9	A217 Gr. C5	A351 Gr. CF8	A351 Gr. CF8M	A351 Gr. CF3	A351 Gr. CF3M	A995 Gr. CD4MCuN

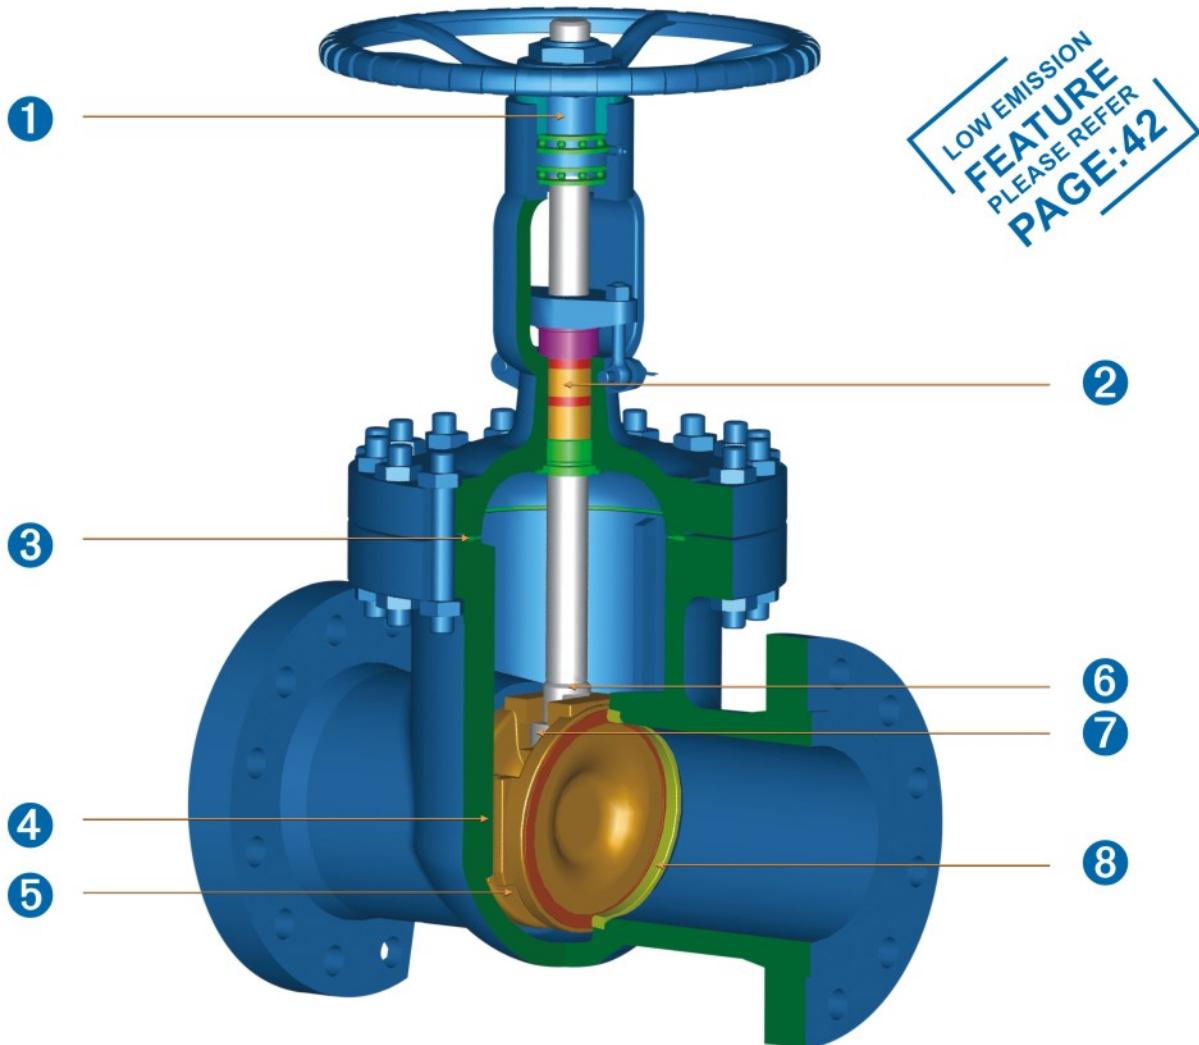

### ⑧ Trim Material

API600 Trim Number	Symbol	Disc Surface	Seat Surface	Stem Material
1	1	13%Cr	13%Cr	ASTM A182 Grade F6a
2	2	18%Cr,8%Ni	18%Cr,8%Ni	ASTM A182 Grade F304
5	5	Stellite	Stellite	ASTM A182 Grade F6a
8	8	13%Cr	Stellite	ASTM A182 Grade F6a
9	9	Monel	Monel	Ni Cu Alloy Monel
10	10	18%Cr,8%Ni	18%Cr,8%Ni	ASTM A182 Grade F316
12	12	18%Cr,8%Ni	Stellite	ASTM A182 Grade F316
13	13	Alloy 20 19%Cr,29%Ni	Alloy 20 19%Cr,29%Ni	ASTM B473
	16	Stellite	Stellite	ASTM A182 Grade F316
	20	Bronze	Bronze	Bronze

Note: 1.Trim number 1 to 13 are same as table 13 in API 600 .

2.Trim number 1 may be replaced by trim number 8 without notice.

# Design Feature Gate Valve

- ① Long thread stem nut to provide long thread life and permit the removal of hand wheel even if fully open.
- ② Spacer ring and single packing set for class 300 and above while only single packing set for class 150. Double packing can be provided on customer's requirement.
- ③ Corrugated steel gasket for 150lb valves, spiral wound gasket for 300lb & 600lb valves, and ring joint for 900lb & above valves or as an option for the 600lb valves on customer request.
- ④ Integral guide rig inside body to assure self-centering of wedge during open or closing.
- ⑤ Flexible wedge to compensate for seat face distortion and body deformation due to pipe stress.
- ⑥ Anti blow-out stem design with collar.
- ⑦ Stem & wedge connection stronger than the thread area of stem.
- ⑧ Renewable seal welded seats with stellite 6 are standard design while screwed-in seats are optional.

- ① Impact handwheel supplied at manufacturer's option or on customer request.
- ② Gland eyebolts are mounted to swing aside to facilitate packing maintenance.
- ③ Male and female bonnet joints for 150lb to 600lb valves, and ring joint for the 900lb & above valves or as an option for 600lb valves on customer request.
- ④ Anti blow-out stem design with conical backseat surface to permit repacking of valve in the fully open position.
- ⑤ Plug seat surface is standard disc design as well as spherical and flat seating surface is optional on customer request.
- ⑥ Seat face with stellite 6 is standard design.

LOW EMISSION  
FEATURE  
PLEASE REFER  
PAGE:42

- ① Corrugated steel gasket for 150lb valves, spiral wound gasket for 300lb & 600lb valves, and ring joint for 900lb & above valves or as an option for the 600lb valves on customer request.
- ② A hinge and hinge pin provided and mounted so as to permit full movement of the disc.
- ③ Standard renewable seal welded seat with stellite 6 while optional screwed-in seat.
- ④ Standard swing disc type; used in horizontal position for liquid service application.
- ⑤ Normal provision for a drain tapping at location G; while additional bosses on customer request.

# Check Valve

Neway valves are produced mainly in two specialized valve plants, one for gate, globe and check valves with capacity of 22000pc/month, and the other for butterfly and ball valves with 12000pc/month. Both plants produce Valves ranging between 1/2" ~ 64" and pressure rating between ANSI Class 150~2500.

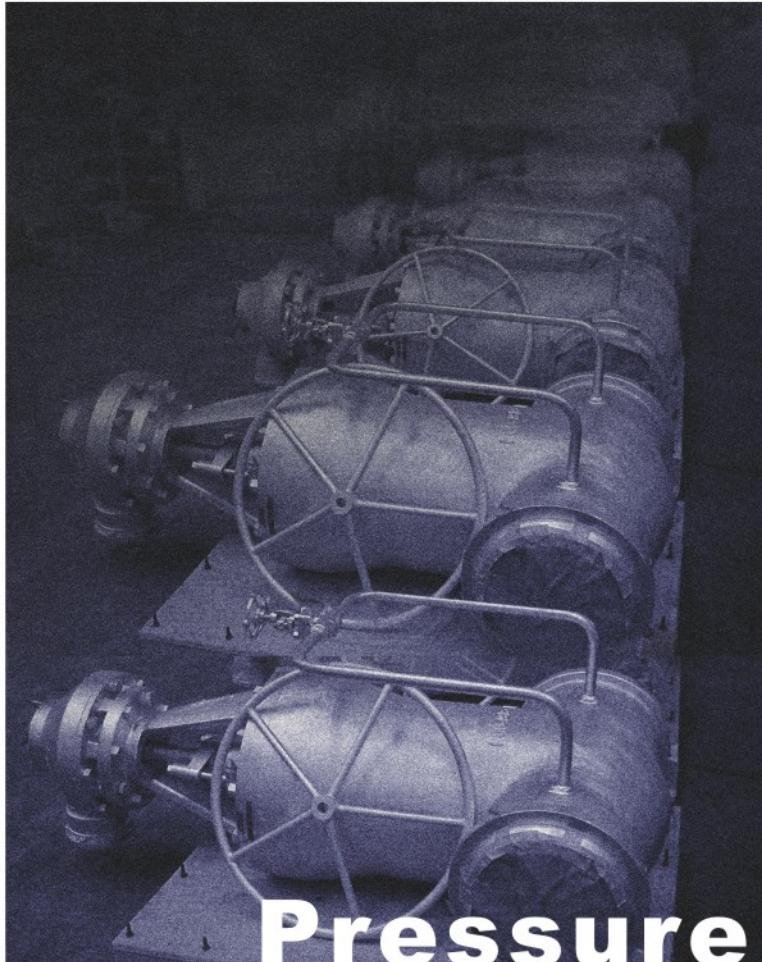

Before painting, all Neway valves are pressure tested with zero leakage acceptance criteria in accordance with API 598 or BS 6755. Neway can also provide some special tests on customer's request, which include up to 17MPa high pressure gas test, cryogenic, low & high temperature test, fire safe test, vacuum test and low emission test.

A worker in a black shirt and blue lanyard stands between large industrial valves, operating a valve handle.

# Pressure Seal Valve

A Stronger and Tighter sealing valve with less weight, bulk and requiring minimum maintenance; especially designed for the high temperature and the high pressure services encountered in nuclear and fossil fuel power plants.

# High Temp. Alloy Steel

## Cast Alloy Steel A217 Grade C12A

**Neway has developed Gate,Globe & Check valves  
for high pressure and high temperature  
applicationsin power plant**

To cater for the tendency of increasing power plant temperature and pressure to improve efficiencies and meet other high temperature industries, Neway has successfully developed cast alloy steel A217 Gr. C12A, this alloy exhibits excellent high-temperature properties based on the formation of a particular microstructure containing submicroscopic carbides; the alloy is also much more resistant to thermal fatigue than the austenitic stainless steel because of its lower thermal expansion rating and higher thermal conductivity. Table 1 below shows the allowable stresses (MPa) for several ASTM materials widely used in high temperature industries, and the chemical composition of C12A is shown in table 2 below :

Table 2

Grade	Basic element											
	C	Si	Mn	S	P	Cr	V	N	Nb	Mo	Ni	AL
ASTM A217 C12A	0.08-0.12	0.20-0.50	0.30-0.60	≤0.01	≤0.03	8.00-9.50	0.18-0.25	0.03-0.07	0.06-0.10	0.85-1.05	≤0.4	≤0.04

In order to create the special microstructure required to meet the high temperature properties as well as nomal ambient temperature conditions, a number of metallurgical processes must be properly

Table 1

Unit: Mpa

Temperature		Castings			Forgings		
°C	°F	WC9	C12	C12A	F22	F9	F91
38	100	138	177.2	146.9	147.6	167.5	167.5
260	500	133	169.6	133	141.3	160.7	166.2
343	650	131.7	164.8	126.9	139.3	155.8	161.3

593	1100	22	22.8	60.7	22	22.8	71

Table 1: ASME code section II allowable stresses.

Note: Alloy C12A or F91 provide much higher allowable stresses in temperature ranging from 482~593°C (900~1100°F)

Figure 1: Acceptable microstructure of castings (100X)<sup>(1)</sup>

Figure 2: Acceptable microstructure after welding. (100X)<sup>(1)</sup>

Figure 3: Acceptable microstructure in heat affected zone. (100X)<sup>(1)</sup>

## 1. Deoxidization

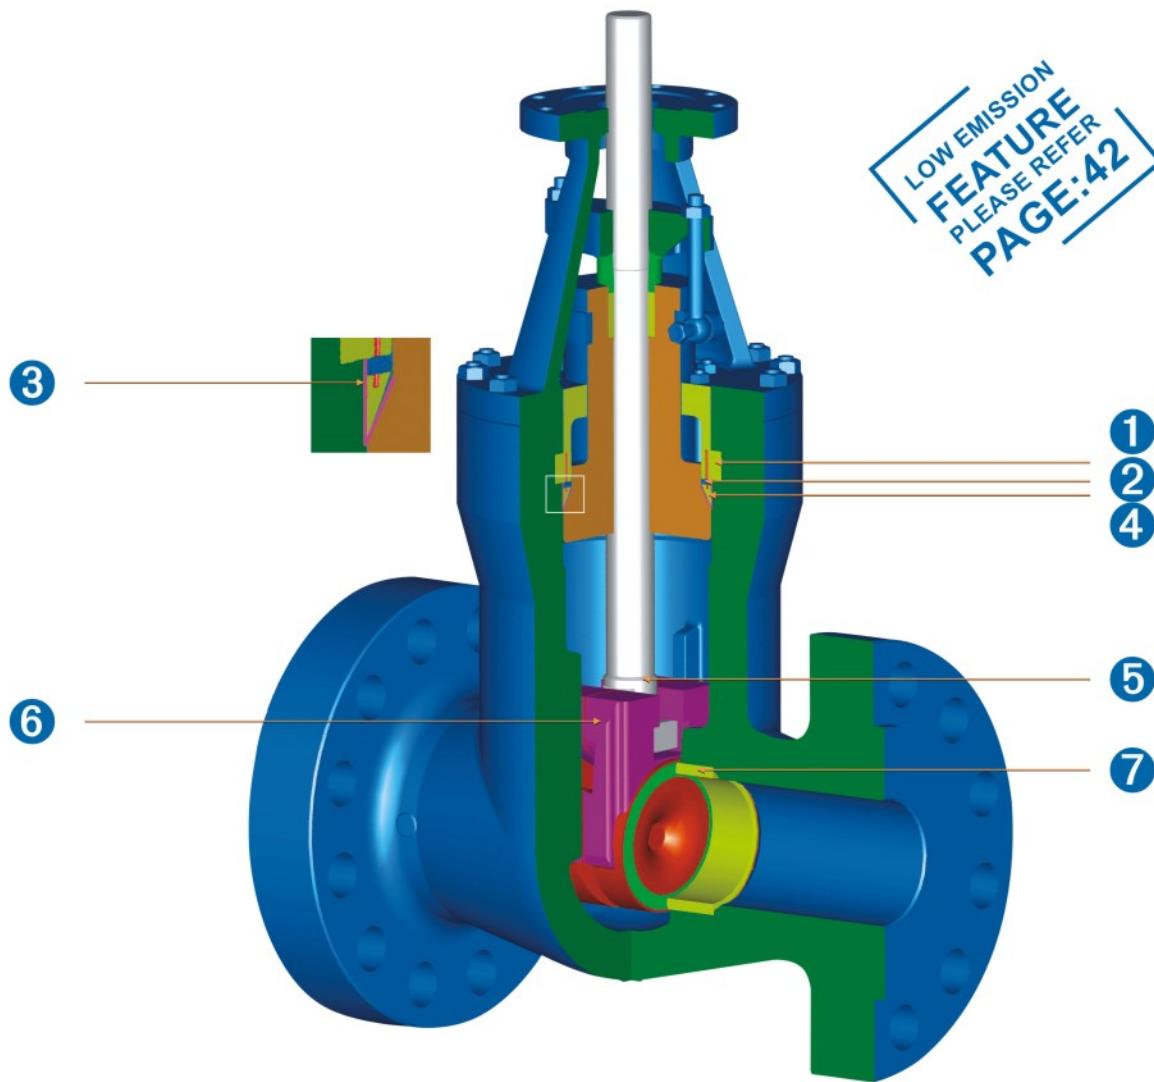

To remove dissolved oxygen prior to pouring castings, small quantities of deoxidizers materials, with a high affinity for oxygen, are added into the melted metal; they combine with the oxygen to form solid oxygen inclusion particles. The most common deoxidizers are manganese, silicon and aluminum. This is a critical process to ensure that an acceptable microstructure is obtained (see Fig 1) and we can achieve high temperature creep strength.

## 2. Heat treatment

This processing is also one of the critical procedures to ensure the proper microstructure. In order to meet the high temperature properties, we perform strict heat treatment procedures; metal temperature,heating and cooling periods are critical in this process.

## 3. Welding & Post-weld heat treatment (PWHT)

To achieve the proper creep resistance and toughness for the high chrome alloy, we use special weld & PWHT procedures, which include pre-heating temperature control and welding filler materials, particular attention is given to PWHT. All processes are controlled precisely to allow the formation of martensite in the weld and heat affected zone (HAZ). Figure 2 & 3 show the acceptable microstructure in weld area and HAZ.

- ① Segmental thrust rings absorb the thrust applied by the internal pressure
- ② Thrust rings to provide bearing surface and prevent deformation of the gaskets
- ③ Stainless steel inlay to ensure soundness and corrosion-resistance in the critical body sealing zone for carbon and alloy steel valves
- ④ Soft steel gasket seal to provide large contact area for perfect sealing
- ⑤ Anti blow-out stem design with collar
- ⑥ Flexible wedge to compensate for seat face distortion and body deformation due to pipe stress
- ⑦ Seat ring with stellite 6 overlay is standard design

# Pressure Seal Globe Valve Design Feature

- ① Thrust ring nut absorb the thrust applied by the internal pressure.
- ② Thrust ring to provide bearing surface to prevent deformation of the gaskets.
- ③ Stainless steel inlay to ensure soundness and corrosion-resistance in the critical body sealing zone for carbon and alloy steel valves.
- ④ Soft steel gasket seal to provide a large seal contact area for perfect sealing.
- ⑤ Seat face with stellite 6 is standard design.

## Pressure Seal Check Valve Design Feature

- ① Segmental thrust ring absorb the thrust applied by the internal pressure.
- ② Thrust ring to provide bearing surface to prevent deformation of the gaskets.
- ③ Soft steel gasket seal to provide a large seal contact area for perfect sealing.
- ④ Stainless steel inlay to ensure soundness and corrosion-resistance in the critical body sealing zone for carbon and alloy steel valves.
- ⑤ No pressure boundary intrusion hinge pin design.
- ⑥ Standard swing disc type to be used in horizontal position for liquid service applications.
- ⑦ Hinge and hinge pin design to permit full movement of the disc.

With the enhancement of people ecological awareness since 1960's, especially under the background of nowaday quick economic globalization, protecting environment is becoming common understanding in present global development, whether developed or developing countries, and had led to born associated law and regulation in different fields, including modern process industries.

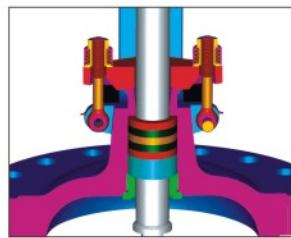

Industrial valves are one of main pollution sources in modern process industries because of fugitive emission. To minimize the risk of process media leaked through valves to human health, safety and environment, Neway developed low emission technology for all series valves, which featured the essential function of controlling effectively the fugitive emission leakage of various media from valves in virtue of emission defense material using and special structure design, and these valves are measured and tested in accordance with ISO 15848 or Shell SPE 77/312.

## Design Features

### Emission Defense Packing

The serial Neway packing set consist of 3 die formed flexible graphite rings and 2 braided flexible graphite rings with cone surface. The graphite packing sets feature pliability, well compression recovery, heat resistance, less stress relaxation and low creep. The structure allows a low friction on rotary & rising stem valves so as to provide the stabilized seal performance for long cycle life.

### Stuffing box and stem finish

All of the valves have been design to have maximum Ra1.6 inside surface of stuffing box, a reasonable rougher surface finish will allow better holding of the packing ring and results in a better sealing performance.

The stem surface finish is controlled to a maximum Ra0.4, and straightness and roundness are precision controlled in accordance with Neway design and manufacturing standard. The structure will ensure the graphite to fill and migrate into the stem micro scratches, and function as a lubricant to reduce leakage through stem.

### Optional Live-loaded Gland Bolts

Live-loaded gland bolts is optional on customer request. The special structure can maintain a permanent packing stress in virtue of two sets of Belleville spring, and extend the low emission service life. Neway standard Belleville springs are protected by a weatherproof cap to keep them from environmental contamination so as to ensure a long and continual stable work life.

### Fugitive Emission Valve Test

Neway full series low emission gate, globe and check valves had been Certified as per TA-Luft, the proto type test and the product test are carried out and inspected by a third party at Neway China plant in year 2003. Below table shown the typical test parameter:

Test Standard	ISO 15848	Neway Acceptable Level	
Test Medium	97% Helium	Stem Seal Leakage Rate	ISO 15848 class B 1.78x10 <sup>-7</sup> Pa.m <sup>3</sup> /s (Per mm Stem diameter)
Test Pressure	Valve body pressure At the selected test Temperature as ASME B16.34	Mechanical Cycles	100
Test Equipment	Helium Spectrometer	Temperature	-196 ~ 450 °C

# NACE Introduction Special Design Feature

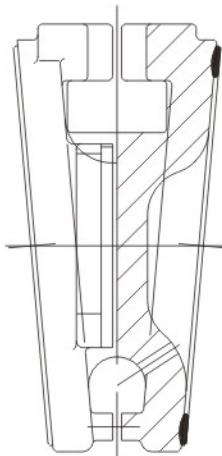

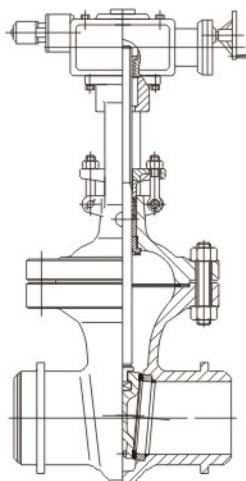

For servicing H<sub>2</sub>S-containing environments in oil and gas production, Neway offer Nace valve made of the component metal materials specially heat-treated and hardness-controlled in compliance with NACE standard MR0175, so as to resist all

mechanisms of cracking that can be caused by H<sub>2</sub>S, including sulfide stress cracking (SSC), stress corrosion cracking (SCC), and other hydrogen-induced cracking. Below table show typical Nace material configuration for Neway cast steel gate valves:

## NACE Valves Compared to API 600 Valves

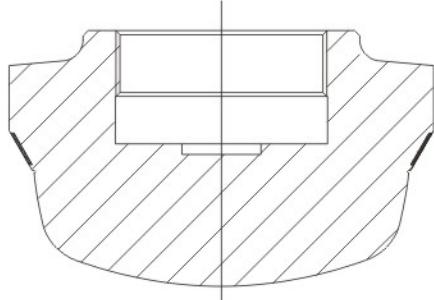

Valve Parts	ASTM Specification	API 600 Valves	NACE Valves
Body/Bonnet	A216 Gr. WCB	≤ 22HRC	≤ 22HRC
Wedge	A216 Gr. WCB or A217 CA15	Quenching + High Temperature Tempering 25–30HRC	Quenching + Double Tempering ≤ 22HRC
Seat Ring	A105 + Stellite 6 Overlayed	Stress Relieving Tempering Overlay hardness ≥ 38HRC	Stress Relieving Tempering Overlay hardness ≥ 38HRC
Stem	A182 F6a	Quenching + High Temperature Tempering 17–22HRC	Quenching + Double Tempering ≤ 22HRC
Gland	ANSI 420	Quenching + High Temperature Tempering 31–35HRC	Quenching + Double Tempering ≤ 22HRC
Backseat Bushing	ANSI 420	Quenching + High Temperature Tempering 31–35HRC	Quenching + Double Tempering ≤ 22HRC
Body/Bonnet Studs		ASTM A193 Grade B7	ASTM A193 Grade B7M
Body/Bonnet Nuts		ASTM A194 Grade 2H	ASTM A194 Grade 2HM

## Special Design Feature

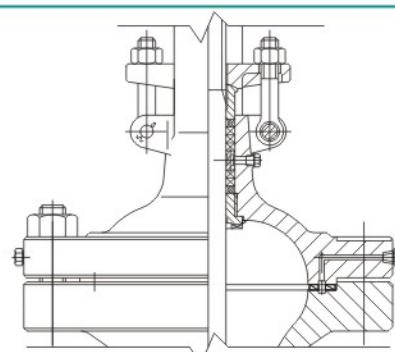

All gate and globe valves can be equipped with electric , Pneumatic or hydraulic actuator, per customer's specification.

Relief provision

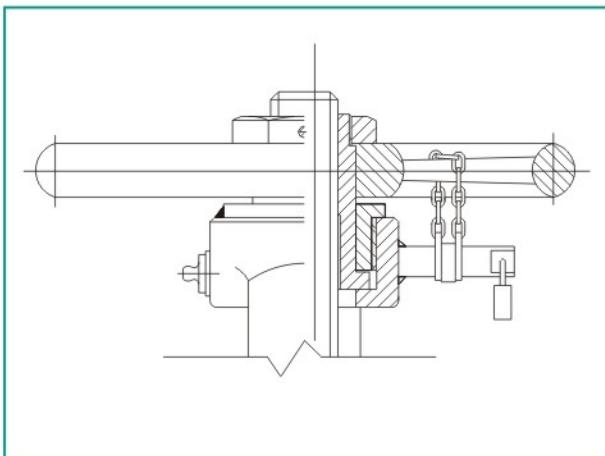

Parabola disc

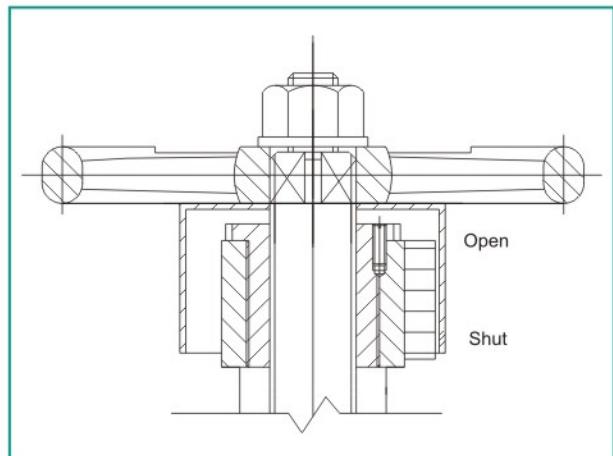

Leak-off detect

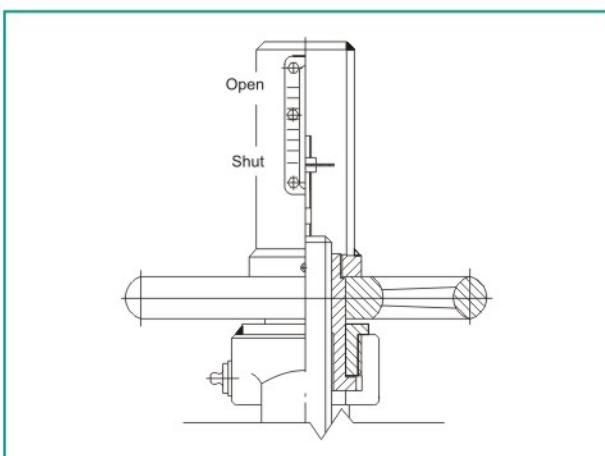

## Special Design Feature

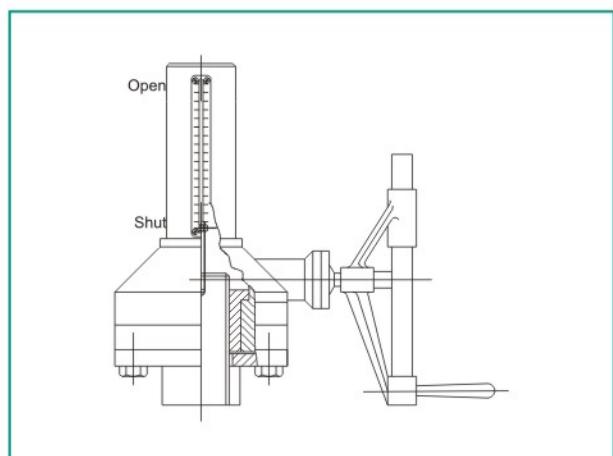

Locking device on the handwheel

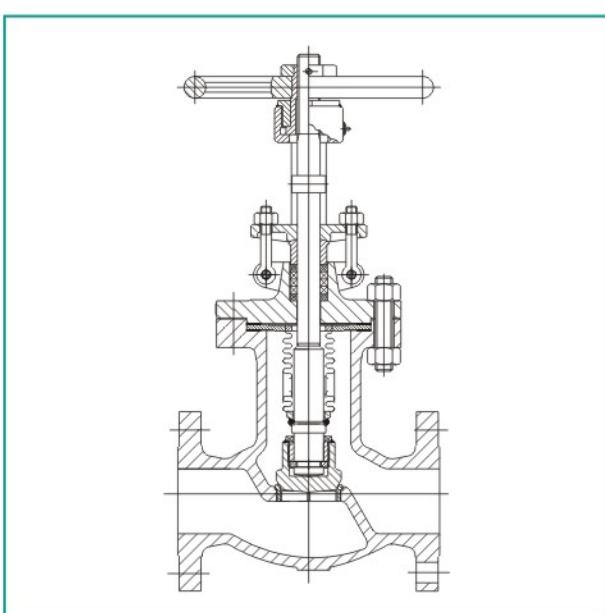

Position indicator on globe valves

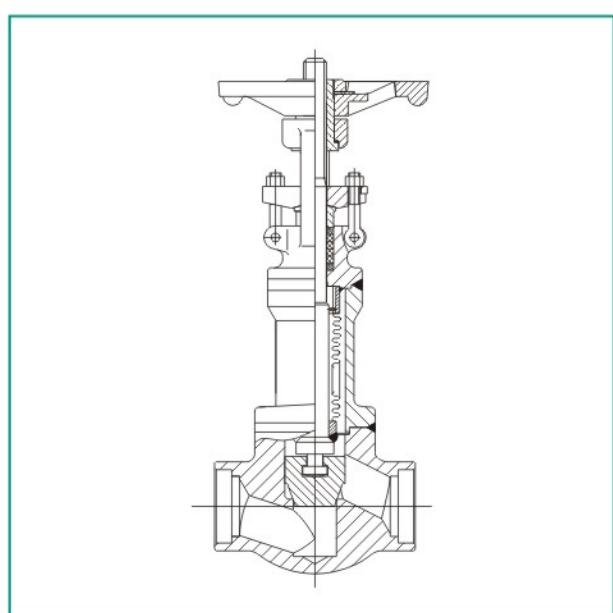

Position indicator on gate valves

Position indicator on gear box

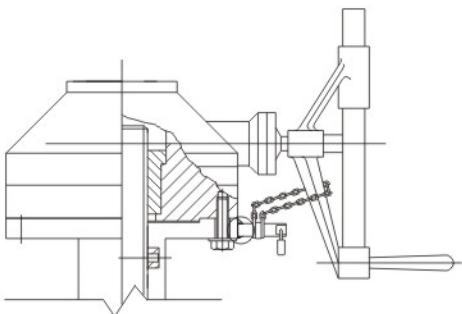

Casting steel bellow seal valves

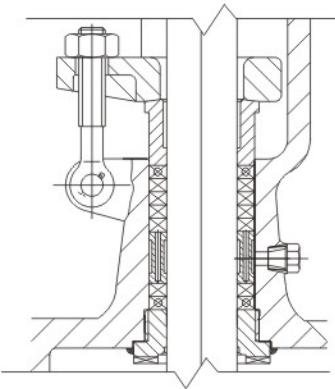

Forging steel bellow seal valves

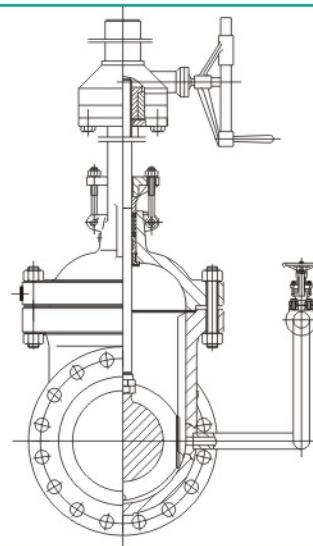

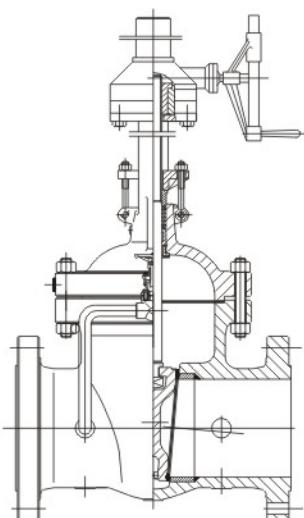

## Special Design Feature

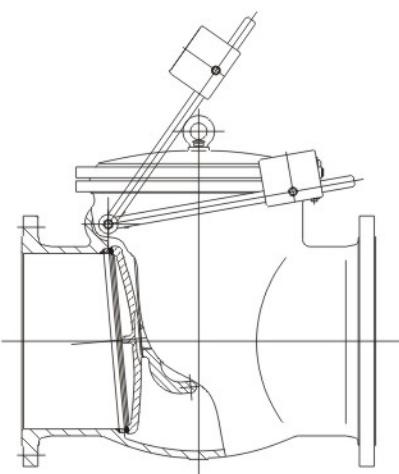

Locking device on the gear box

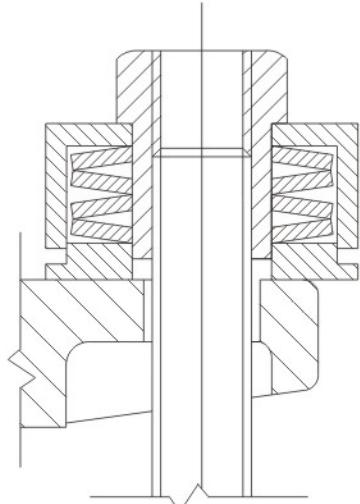

The lantern on the gate and globe valves

Special by-pass application

Check valves with damping box  
and equilibrium hammers

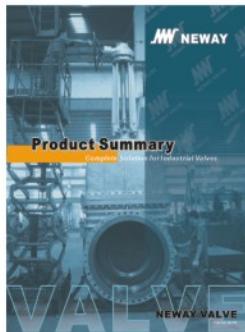

Live-loaded gland flange

## **Product Warranty**

---

Seller will replace without charge or refund the purchase price of products provided by Seller which prove to be defective in material or workmanship, provided in each case that the product is properly installed and is used in the service for which Seller recommends it and that written claim, specifying the alleged defect, is presented to the Seller within 18 months from the date of shipment or 12 months after installation, whichever occurs first. Seller shall in no event bear any labor, equipment, engineering or other costs incurred in connection with repair or replacement. The warranty stated in this paragraph is in lieu of all other warranties, either expressed or implied. With respect to warranties, this paragraph states Buyer's exclusive remedy and seller's exclusive liability.
